Smartjog

Smartjog is a Cognacq-Jay Image fast and robust service for transferring files, directories and large data sets with many users across a private network at any distance on wide area networks. It combines transport protocol with exceptional transfer and user management capabilities for enterprise applications. It guarantees the integrity and security of every files exchanged across its highly monitored network. Smartjog has been used by the Media & Entertainment industry leaders for the last 15 years.

With the transport protocol technology at its core, the Smartjog service delivers unmatched performance with maximum transfer throughput independent of distance and network conditions. It achieves speeds up to multiple times faster than FTP/SCP, with end-to-end security and bandwidth maximization.

Thanks to a hybrid architecture between on premises hardware, software, web-based UI and private cloud infrastructure, the solution adapts to all the constraints of the customers and their partners.

The edge gateway giving access to the Smartjog global private network, is available on premises or in the cloud:
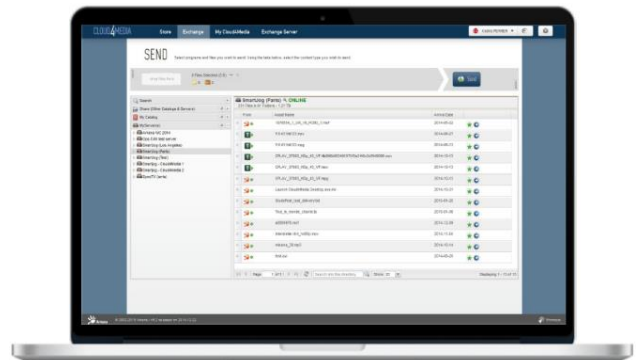

- As a **software only** model being able to run on **virtual machines**
  Packaged as an OVA file, application is imported and deployed into any host supporting this standard. It can be used from a high performance's hardware (enterprise server) to any desktop using VMWare® Workstation Pro©, Oracle® VirtualBox® among others.

- As a **Machine Image** to be deployed in public **cloud infrastructure**
  For example customers having production and storage capacities hosted in public cloud, a Machine Image (AMI) is provided to be used within Amazon Web Services®

- As an **on-premises physical server** delivered to your facility and ready to use
  For those not constrained to deeply manage IT infrastructure, a plug & play physical server is provided to the customer premises.
  Two models are provided depending on storage capacity required.

BENEFITS

- ✓ File agnostic, ready for UHD file size

- ✓ Easily integrated into your existing environment

- ✓ Quick set-up to connect to all your business partners and vendors

- ✓ Content accessible from anywhere in the world

- ✓ Access to a user-friendly web-based interface

- ✓ Track file information including download history

- ✓ Guaranteed end-to-end file integrity

- ✓ Automate your deliveries, thanks to a set of rich REST API

- ✓ Create distribution lists to simplify your deliveries

- ✓ View detailed file information with the option to export transfer history

- ✓ Embedded tools to transcode or add visible mark for dubbing workflows

- ✓ Prioritize incoming & outgoing files and cancel transfers in progress from the web UI

SERVICES

- True premium assistance provided by team of experts and enabled by approach of proximity, listening and responsiveness with our customers

- Managed services, fully handled, updated and monitored infrastructure

- World-class support service available 24/7

- Fastest possible reaction to network issues 24/7

- Upon request, integration support to implement solution within global workflow or existing ecosystem
